ISA 2007 – Booth #3663

With Inca Spyder Flatbed Printers, FUJIFILM Offers Unparalleled Speed, Quality and Output

VALHALLA, N.Y. (April 9, 2007) – Bringing together FUJIFILM's expertise in color and Inca's popular Spyder line of wide format flatbed printers, FUJIFILM Graphic Systems U.S.A., Inc. is able to offer a full line of Inca Spyder flatbed digital presses, including the Spyder 320-8, Spyder 320+ Six Color, Spyder 320+ White, Spyder 320 and Spyder 320-e. With the rapidly growing demand for wide format technology, the line of Inca Spyder devices offers the right combination of speed, quality and affordability. FUJIFILM will showcase its full line of wide format solutions at ISA 2007 in Las Vegas on April 12-14, 2007.

"The Inca Spyder is one of the most productive and prestigious lines of UV printers and we're pleased to add them to our list of product offerings," said Steve Bennett, vice president of sales and marketing for FUJIFILM's wide format group. "We know that our customers will benefit tremendously from this technology and these devices and we're ready to help with implementation and with showing them how to sell it to their customers."

At 860 sq. ft. per hour, the Spyder 320 provides the right combination of versatility and performance. Its flatbed design allows for easy loading and unloading of rigid materials and it boasts the fastest print speeds in its class, with market-leading print quality and high definition detail. It prints directly onto the widest range of flexible and rigid substrates, up to 1.2" thick.

The Spyder is available in four-, six- or eight-channel models, plus a white configuration, giving printers the flexibility to grow and add capabilities.

"Our customers require excellent products with superior support," said Bennett. "The Spyder products fit these criteria, and offer the best return-on-investment of any UV printer in its class."

The Uvijet UV ink system from Fujifilm Sericol provides superior adhesion and flexibility with a satin finish and gives users maximum color brilliance, light-fastness and durability. Fujifilm Sericol's Uvijet inks dry instantly when activated by UV radiation, causing them to remain

stable in the print head. This ensures excellent reproduction, while drying fast enough to keep up with the speed of the Spyder 320 press.

For more information on the Inca Spyder family of flatbed printers or any of FUJIFILM's new wide format solutions, please visit Booth #3663 during ISA 2007 or visit us online at www.fujifilmgs.com.
