Graph Expo 2006 – Booth #5078

Fujifilm Adds Inca UV Printers To Wide Format Mix

VALHALLA, N.Y. (Oct. 15, 2006) – Fujifilm is helping printers “Go Wide, Go Anywhere” by continuing to add best-in-class products to its wide format mix. The company announced today, in conjunction with Fujifilm Sericol, that it is now distributing the full line of Inca products to the graphic arts market.

“Inca manufactures the most productive and prestigious line of UV printers and we’re pleased to add them to our list of product offerings,” said Steve Bennett, vice president of sales and marketing for Fujifilm’s wide format group. “We know that our customers will benefit tremendously from this technology and these devices and we’re ready to help with implementation and with showing them how to sell it to their customers.”

Inca’s line of products includes the Columbia Turbo and Spyder 320 production UV digital presses. At 860 sq. ft. per hour, the Inca Spyder 320 provides the right combination of versatility and performance. Its flatbed design allows for easy loading and unloading of rigid materials and it boasts the fastest print speeds in its class, with market-leading print quality and high definition detail.

As with all Inca products, the Spyder 320 is manufactured with the highest standards of design and build quality.

“Our customers require excellent products with superior support,” said Bennett. “Inca Digital products fit these criteria, and offer the best return-on-investment of any UV printer in its class.”

The Uvijet UV ink system from Fujifilm Sericol provides superior adhesion and flexibility with a satin finish and gives users maximum color brilliance, light-fastness and durability. Fujifilm Sericol’s Uvijet inks dry instantly when activated by UV radiation, causing them to remain stable in the print head. This ensures excellent reproduction, while drying fast enough to keep up with the speed of the Spyder 320 press. The full family of Inca Spyder presses is available from Fujifilm and includes:

- Spyder 320-e 8-Head
- Spyder 320-e 8-Head Bidirectional
- Spyder 320 16-Head
- Spyder 320-S 16-Head Six Color (C, M, Y, K, Lc, Lm)
- Spyder 320-W 16-Head (C, M, Y, K, White)

For more information about these solutions, including the full line of Inca’s Spyder presses, please visit Fujifilm at the Fujifilm/Mutoh Booth #5078 in the Wide Format Pavilion during Graph Expo 2006. Please also visit them on the web at www.fujifilmgs.com.
